11%

Is the percentage that we aimed for in order to activate the **critical yeast*** [community catalyst multiplier agents] that is needed to mobilise the critical mass of the region.

In the case of the Garrotxa, we had to mobilise at least 6.000 people directly.

* John Paul Lederach, 2004

6.700 participants

Leverage Points

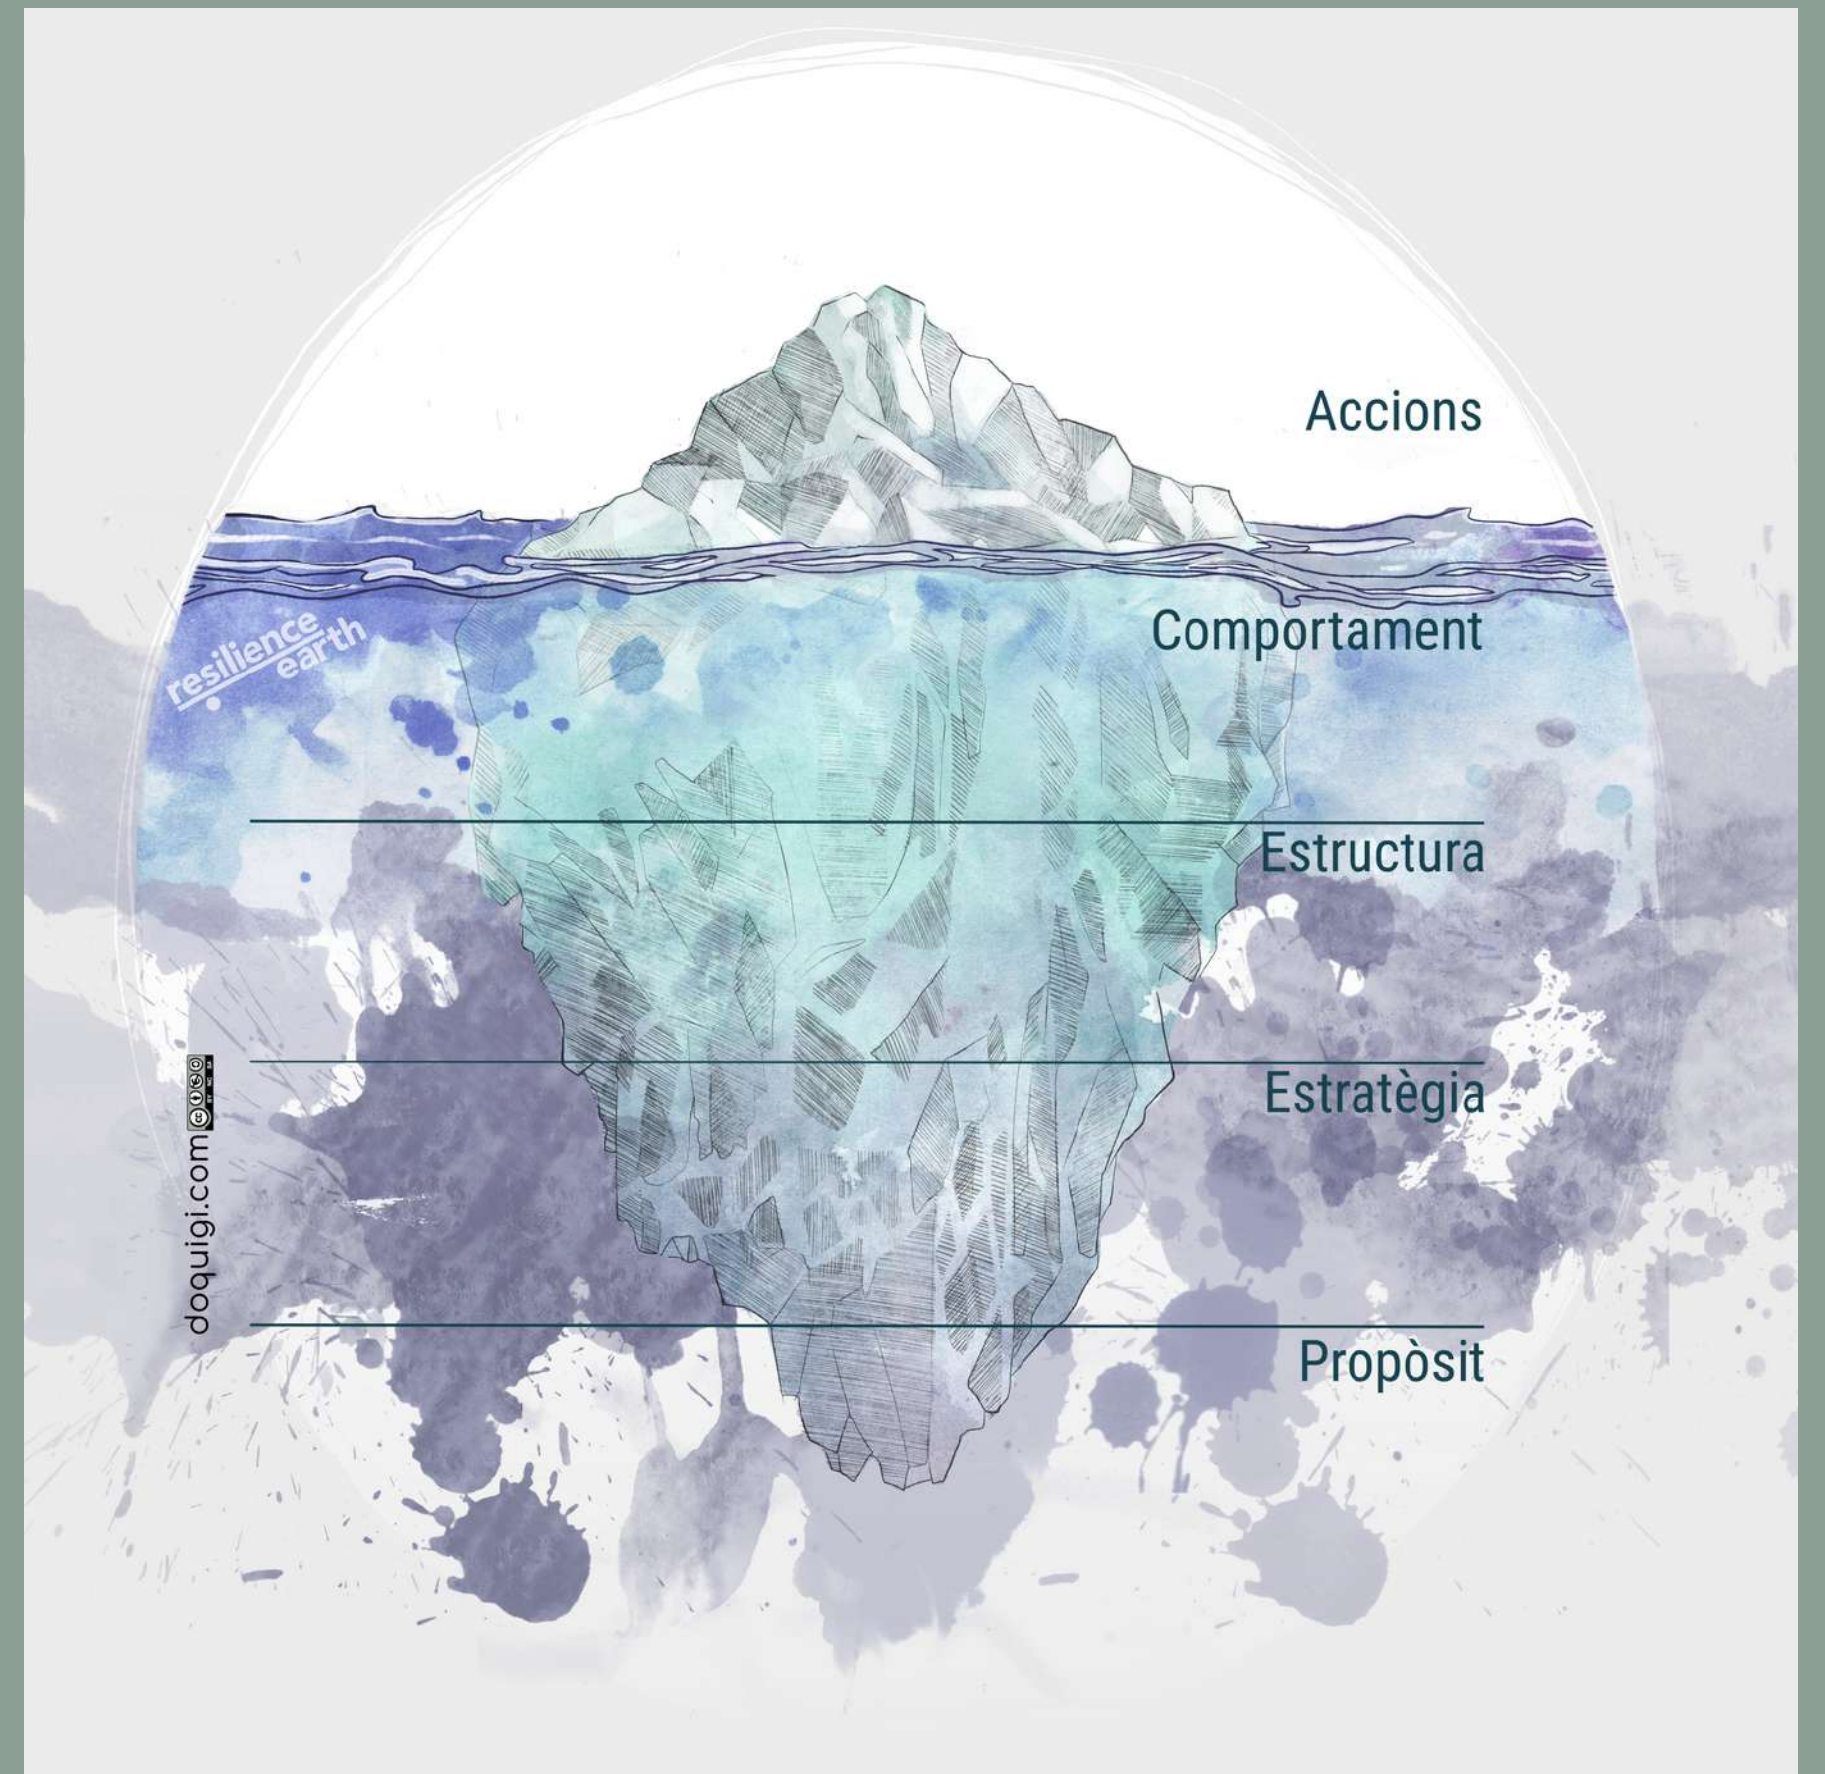

To carry out a participatory diagnosis of the bioregion, we needed to accompany this critical yeast to identify the region's **leverage points***.

*Donella Meadows, 2001

*Peter Senge, 2010

*Otto Scharmer, 2017

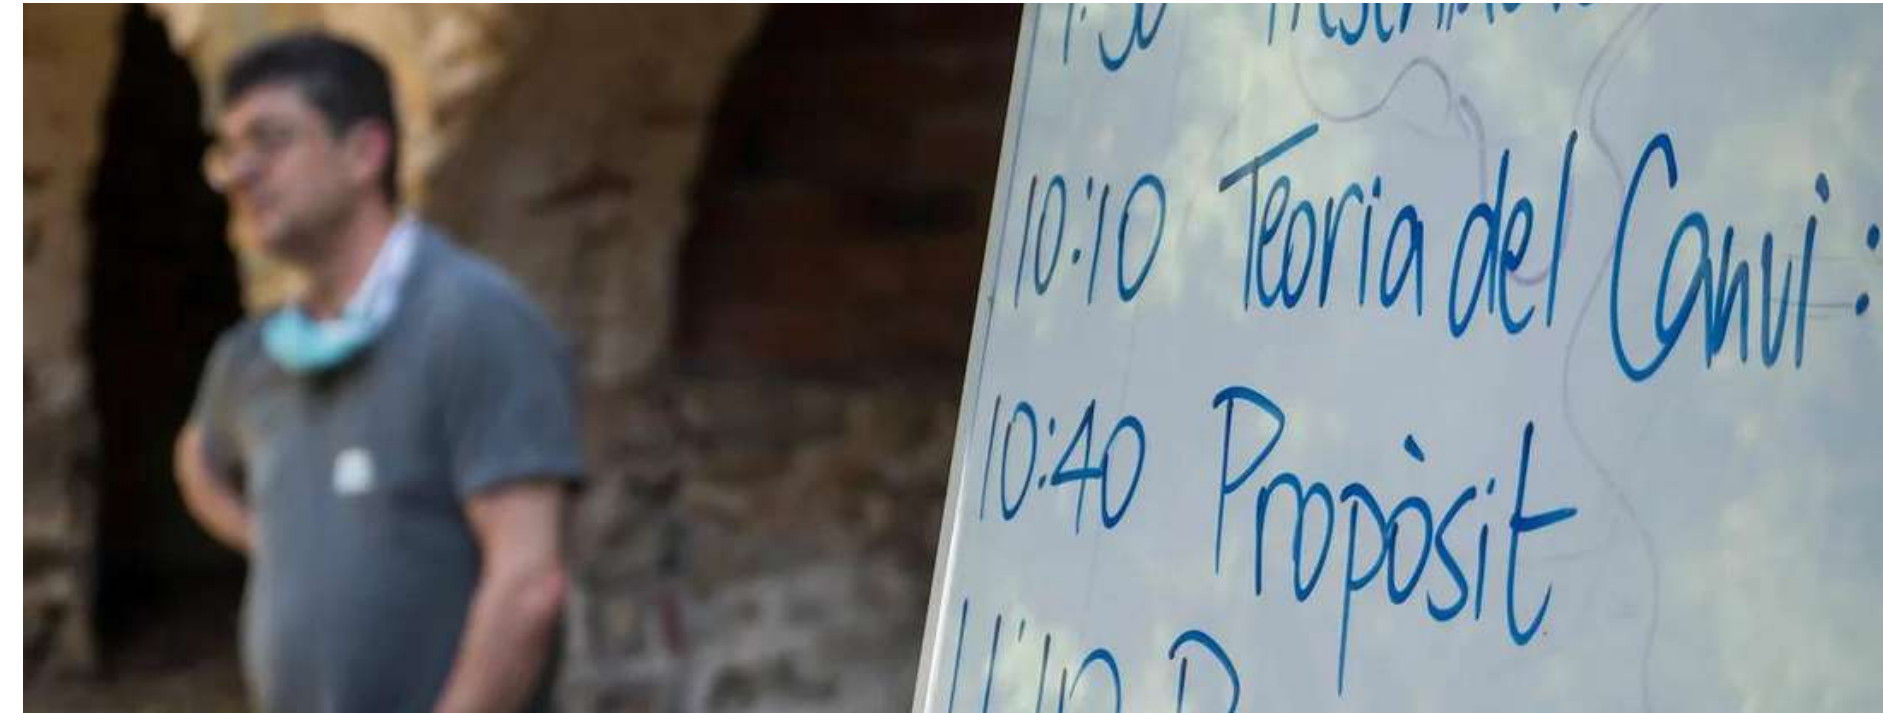

16 thematic round tables
700+ participants

The Bioregional Observatory of the Garrotxa

Bioregional observatories are fundamental for catalysing democratic processes and it is essential that we nourish them from a community-led (citizen sensing/science) and transectorial approach in order to move towards being a more **resilient territory**.

18 technical sessions
120 experts from all sectors

These observatories would contain people with excellent minds and tools, but they would not be walled off, as scientific centers so often are, either from the lives of ordinary people or from the realities of political processes. The people in these centers would be at home with farmers, miners, planners, and heads of state and they would be able both listen to and talk to all of them.

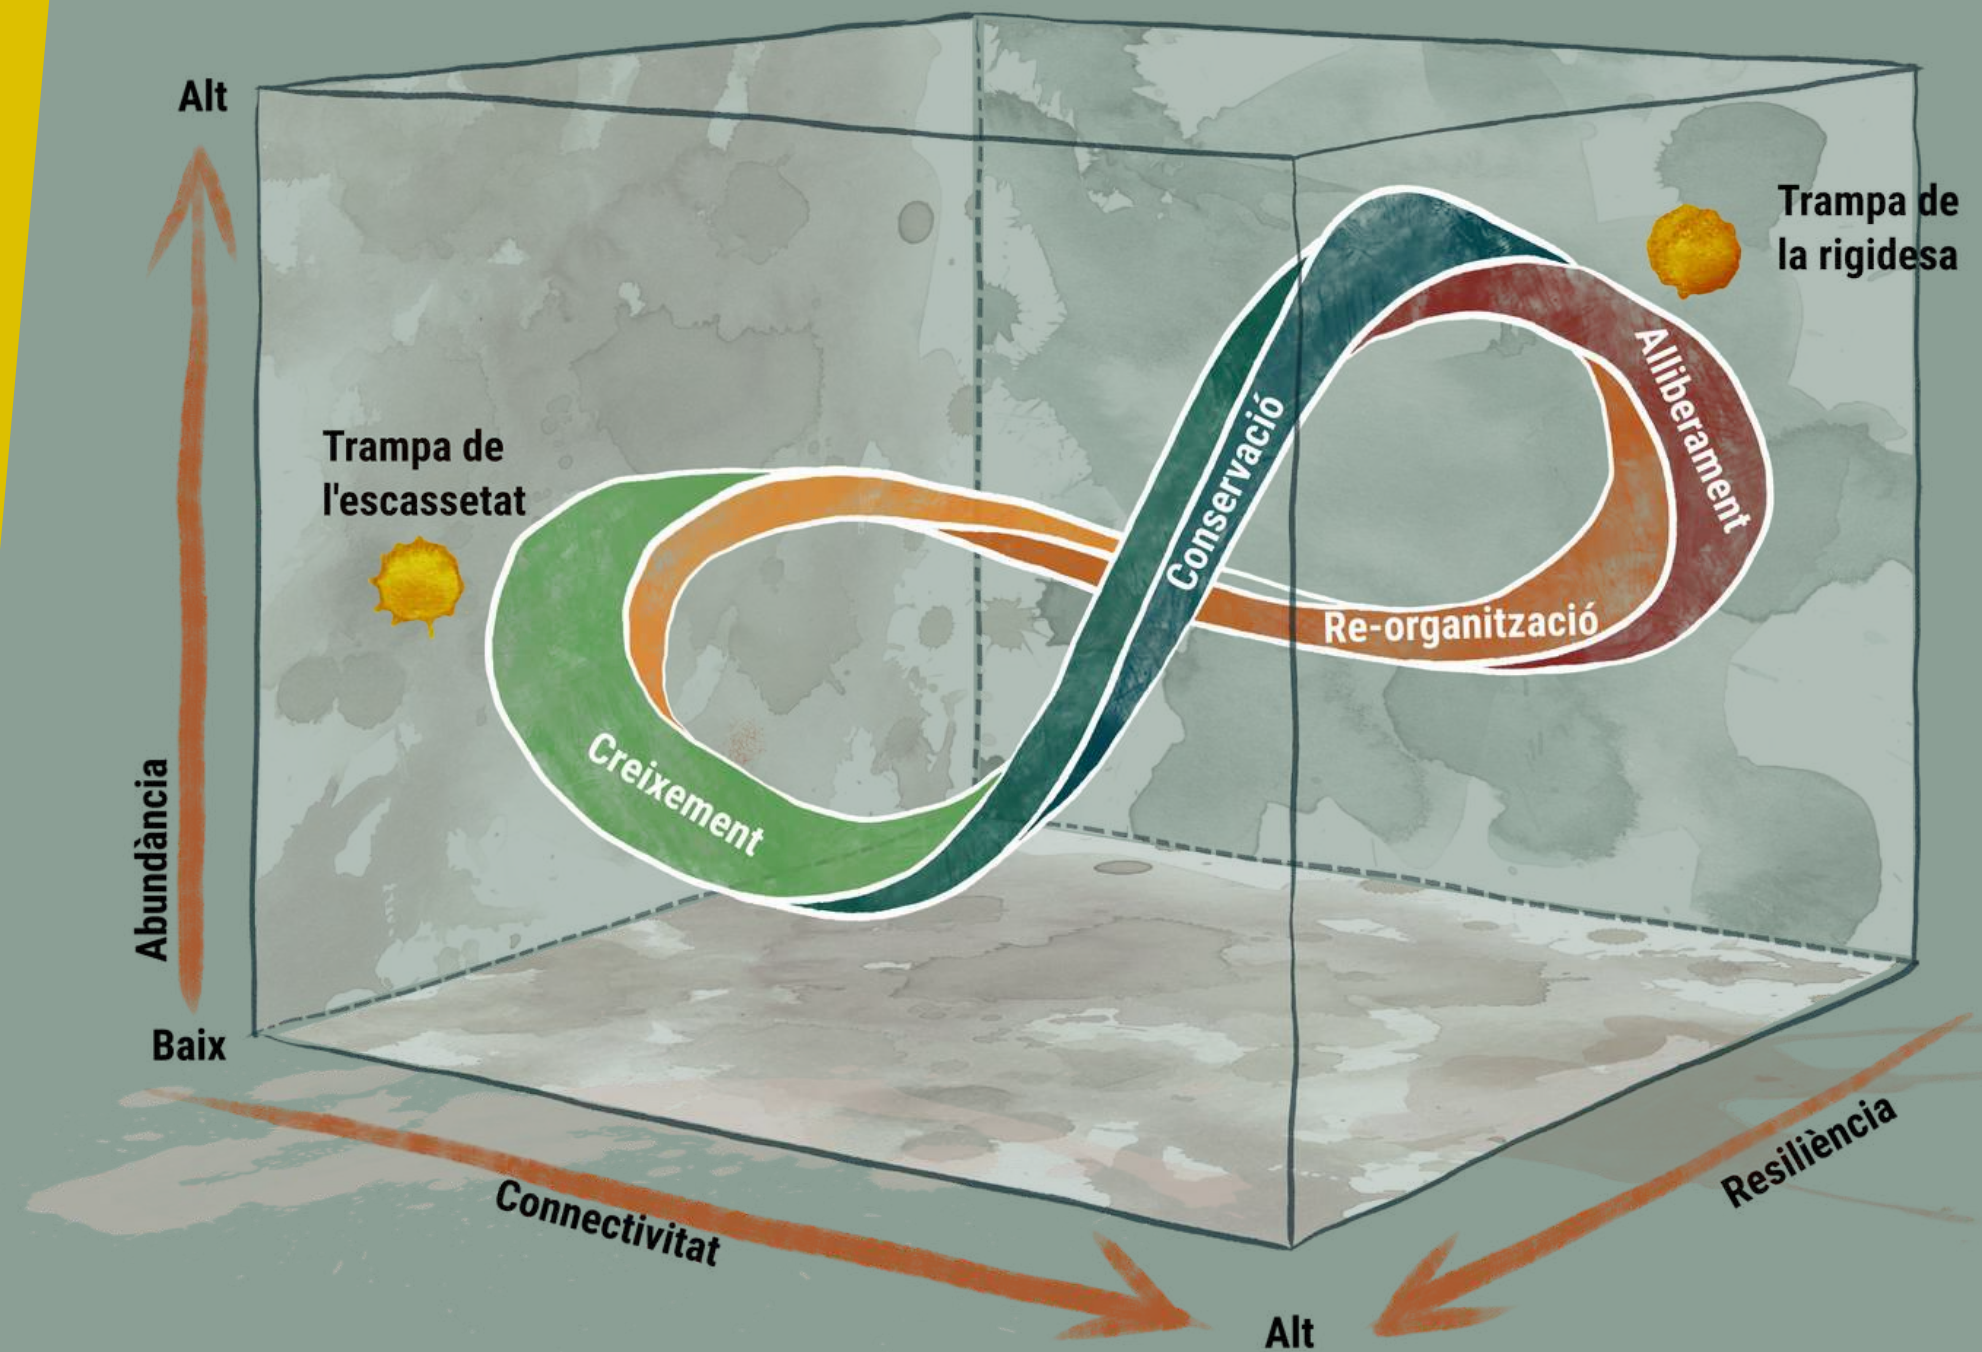

- Donella Meadows

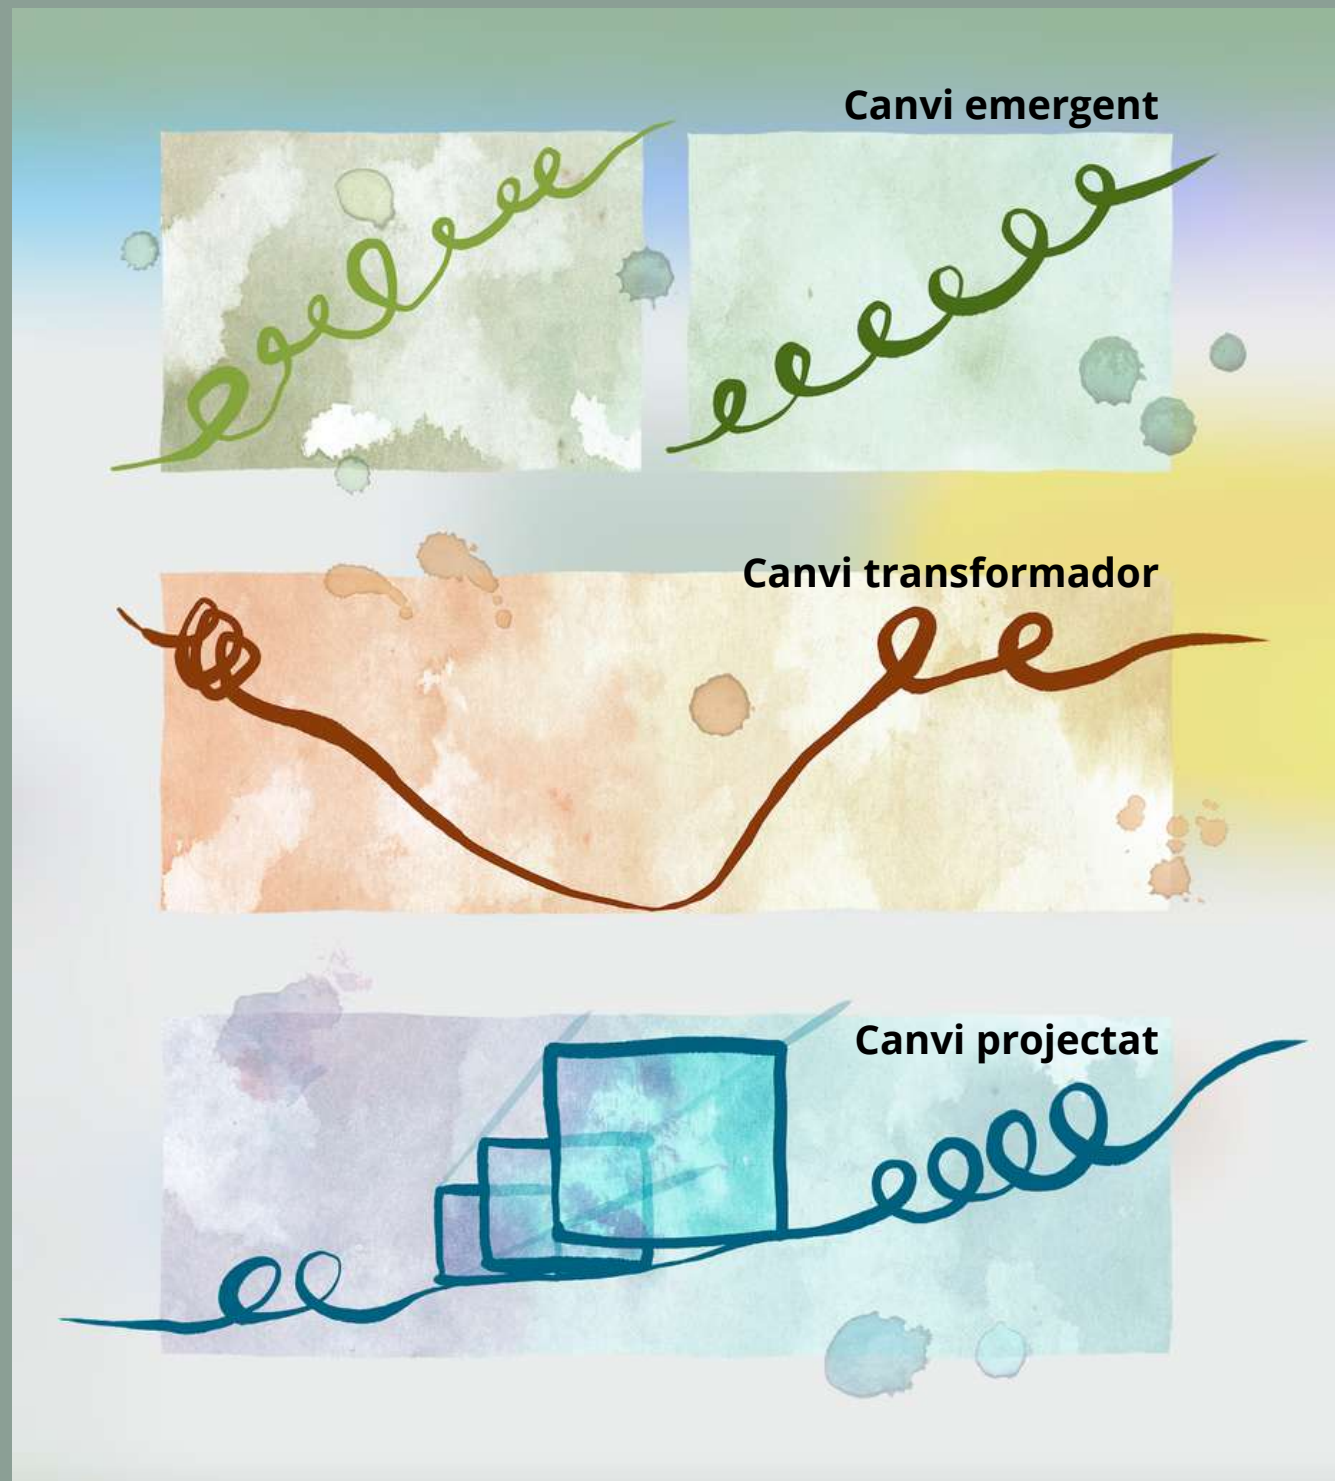

Based in Resilience

We worked using regenerative design and from a **systemic perspective of the SDGs**, following the work of Stockholm Resilience Centre.

*Johan Rockstrom, 2016

17 SDGs turned into 21 ODGs

Theories of Change

In this time of systemic crisis, in order to be able to be a resilient territory, we need to know how to **manage change in an adaptive way***.

To do so, we must listen to the emergent process and define a unique theory of change that is rooted to place and people.

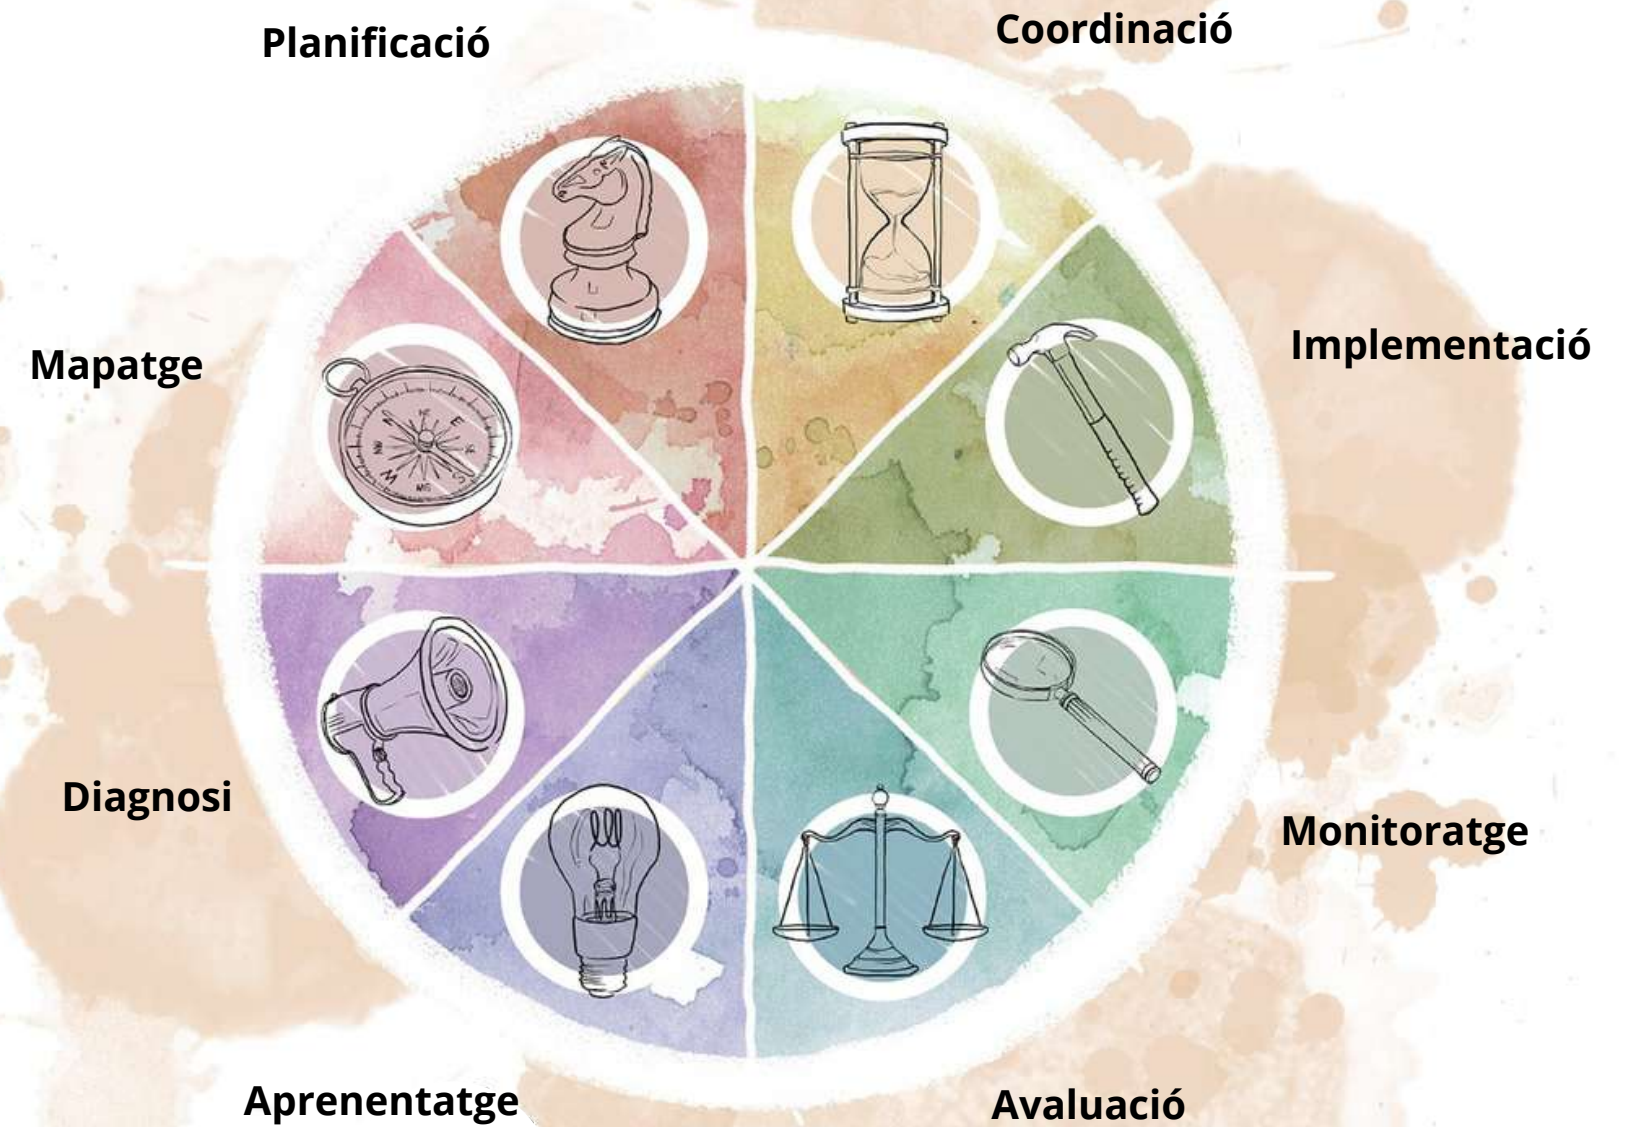

*Doug Reeler, 2011

21 strategic objectives
79 regenerative actions
+400 indicators

A Value-Adding Process

To carry out a **regenerative strategic design process*** for the bioregion of La Garrotxa, we followed 8 value-adding phases.

*Regenesis Group, 2019

Thank you!!
